

ABSTRACT OF THE DISCLOSURE

It is an object of the present invention to reduce a burden on a maintenance terminal of a storage control system. A storage control system 13 includes one or more operation information storages 59 in which operation information of the storage control system 13 is stored. Among plural DKAs 43 in the storage control system 13, a representative DKA 43D connected to the operation information storage 59 reads out operation information stored in an SM 39 and stores the operation information in the operation information storage 59. The operation information stored in the operation information storage 59 is outputted to an SVP 11 in a form in which the operation information is not stored in an HDD 7 of the SVP 11.
